# 1 Abstract

The purpose of this document is to explain to the end user how to use the Rest API provided by Railisa.

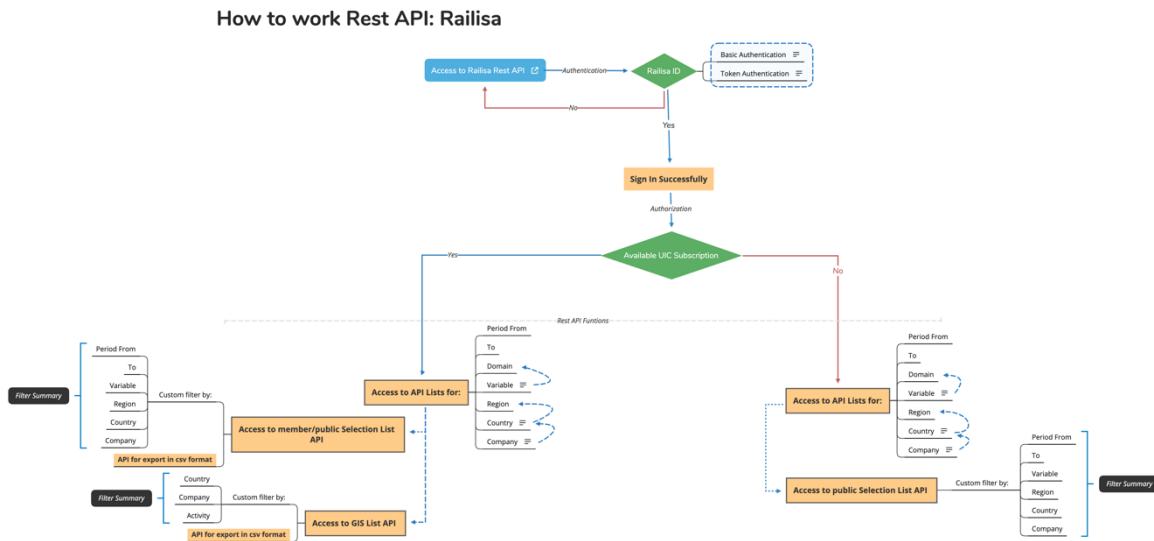

## 2 Railisa Rest API proof of concept

The Railisa Rest API implemented as the Railisa web application module.

This module provides to the end user with all the functionalities offered by Railisa Application, but all the functionalities will be provided as REST APIs.

Practically the end user will have the possibility to integrate these functionalities in his own application, having the possibility to make queries and to obtain the data in JSON or csv format.

The figure below shows the logical flow of Railisa Rest API.

## 3 Functionalities of Railisa Rest API

Railisa Rest API provide the following functionalities:

- Authentication mechanism based on Basic Authentication or Token Authentication
- Authorization mechanism based on groups permissions
- APIs for reading nomenclatures for Selections
  - List of domains
  - List of filterable variables by domain
  - List of regions
  - List of filterable countries by regions
  - List of filterable company by countries
  - List of unit
  - List of countries
- API for selections data with dynamic filtering capabilities based on APIs for reading nomenclatures for Selections
- API for CSV export based on API for selections data
- APIs for reading nomenclatures for Infographics (will be available in the next version of Rest API)
  - List of countries
  - List of filterable company by countries
  - List of filterable activities by company
- GIS API for selections data with dynamic filtering capabilities based on APIs for reading nomenclatures for Infographics

## 4 Open API Schema

This Rest API was developed in accordance with the specifications of [OpenAPI version 3](#).

The Rest API Schema Provide the Rest API definitions. This definition can be used by documentation generation tools to display the API, code generation tools to generate servers and clients in various programming languages, testing etc.

Railisa API v1

          required: false
          in: query
          description: domain name
        schema:
```

## 5 Rest Api View

It offers a web interface, through which you can perform queries in visual mode.

This will help you test the features offered by this Rest API.

As well as how to integrate this service in your applications.

}
```

## 6 Authentication mechanism based on Basic Authentication or Token Authentication

Access to the Rest API functions is only available to users registered in the system.

Rest API provides two authentication mechanisms: Basic Authentication or Token Authentication.

If you use the Basic Authentication method, the user must provide his Username and Password when calling each function called

Java Script example for use Basic Authentication:

```

1. var form = new FormData();
2. form.append("username", "test");
3. form.append("password", "test12345");
4.
5. var settings = {
6.   "async": true,
7.   "crossDomain": true,
8.   "url": "https://uic-stats.uic.org/api/domains/",
9.   "method": "GET",
10.   "headers": {
11.     "Authorization": "Basic bHVjaWFuMjphbGU1MjE5NzM=",
12.     "User-Agent": "PostmanRuntime/7.19.0",
13.     "Accept": "*/*",
14.     "Cache-Control": "no-cache",
15.     "Postman-Token": "0f7cca40-5b18-425f-a5c9-a9b0971c4f7a,53332392-be0b-4d50-
    8dc7-65e9abeb64a",
16.     "Host": "uic-stats.uic.org",
17.     "Content-Type": "multipart/form-data; boundary=-----
    156797782820618184521152",
18.     "Accept-Encoding": "gzip, deflate",
19.     "Content-Length": "286",
20.     "Connection": "keep-alive",
21.     "cache-control": "no-cache"
22.   },
23.   "processData": false,
24.   "contentType": false,
25.   "mimeType": "multipart/form-data",
26.   "data": form
27. }
```

```

28.
29. $.ajax(settings).done(function (response) {
30.   console.log(response);
31. });
32.

```

If you use the Token Authentication, this involves 2 steps

- Obtaining the token
- Token use when calling each function called

Java Script example for obtain Token:

```

1. var form = new FormData();
2. form.append("username", "test");
3. form.append("password", "test12345");
4.
5. var settings = {
6.   "async": true,
7.   "crossDomain": true,
8.   "url": " https://uic-stats.uic.org/api/api-token-auth/",
9.   "method": "POST",
10.   "headers": {
11.     "cache-control": "no-cache",
12.     "Postman-Token": "04655c10-4bc9-45e8-8efe-a13f02785981"
13.   },
14.   "processData": false,
15.   "contentType": false,
16.   "mimeType": "multipart/form-data",
17.   "data": form
18. }
19.
20. $.ajax(settings).done(function (response) {
21.   console.log(response);
22. });
23.

```

Java Script example for use Token Authentication:

```

1. var form = new FormData();
2. form.append("username", "test");
3. form.append("password", "test12345");
4.
5. var settings = {
6.   "async": true,
7.   "crossDomain": true,
8.   "url": "https://uic-stats.uic.org/api/domains/",
9.   "method": "GET",
10.   "headers": {
11.     "Authorization": "Token tutyu567567gfhgfhj6765713gfhgfh908809",
12.     "User-Agent": "PostmanRuntime/7.19.0",
13.     "Accept": "*/*",
14.     "Cache-Control": "no-cache",
15.     "Postman-Token": "df4a65b2-50d8-4496-b5f0-fe5d604c1403,206a097a-aa01-4b16-
a75f-f64144c9ba6f",
16.     "Host": "uic-stats.uic.org",
17.     "Content-Type": "multipart/form-data; boundary=-----
876253164551911932612168",
18.     "Accept-Encoding": "gzip, deflate",
19.     "Content-Length": "286",
20.     "Connection": "keep-alive",
21.     "cache-control": "no-cache"

```

```

22.    },
23.    "processData": false,
24.    "contentType": false,
25.    "mimeType": "multipart/form-data",
26.    "data": form
27.  }
28.
29. $.ajax(settings).done(function (response) {
30.   console.log(response);
31. });
32.

```

## R example for use Token Authentication:

```

1. # Title      : Railisa R Client for Rest API. Obtain Token for Authentication
2. # Objective  : Demo. How to consuming Railisa Rest API in R.
3. # Created by: lucian
4. # Created on: 07/08/2020
5.
6. #install.packages("httr")
7.
8. #Require the package so you can use it
9. require("httr")
10. #install.packages("jsonlite")
11.
12. #Require the package so you can use it
13. require("jsonlite")
14.
15. #Paste_API_Username_Here. Change with your Railisa Username
16. Username <- "Test"
17. #Paste_API_Password_Here. Change with your Railisa password
18. Password <- "test12345"
19.
20. #Base URL Railisa rest API
21. token_url <- "https://uic-stats.uic.org/api/api-token-auth/"
22.
23. login <- list(
24.   username = Username,
25.   password = Password
26. )
27.
28. #this directive are used because the SSL certificat on Railisa preproduction
   was expired
29. httr::set_config(config(ssl_verifypeer = 0L))
30.
31. token <- POST(token_url, body = login, encode = "form")
32.
33. get_token <- content(token, "text", encoding = "UTF-8")
34.
35. #Obtain Token for Authentication
36. #The results are format "[1]
   "{\"token\":\"tutyu567567gfhgfghj6765713gfhgfh908809\"}"""
37. # Token values is tutyu567567gfhgfghj6765713gfhgfh908809
38. #get_token
39. get_token_json <- fromJSON(get_token, flatten = TRUE)
40. get_token_df <- as.data.frame(get_token_json)
41. get_token_df
42.

```

## Python example for use Token Authentication:

```

1. def login(username, password):
2.     url = 'https://uic-stats.uic.org/api/api-token-auth/'
3.     payload = {'username': username,
4.                'password': password}

```

```

5.     files = []
6.     headers = {}
7.     response = requests.request("POST", url, headers=headers, data=payload,
8.         files=files, verify=ssl.CERT_NONE)
9.     return response.json()['token']

```

## 7 APIs for reading nomenclatures for Selections

### 7.1 List of domains

For obtain the list of domains the Rest API provide the function “Domain List”

Method: `GET`

URL: `/api/domains/`

Filter by (optional): `domain_name` (eg. `/api/domains/?domain_name=Accidents`)

JavaScript example:

```

1. var form = new FormData();
2. form.append("username", "test");
3. form.append("password", "test12345");
4.
5. var settings = {
6.   "async": true,
7.   "crossDomain": true,
8.   "url": "http://uic-stats.uic.org/api/domains/?domain_name=Accidents",
9.   "method": "GET",
10.  "headers": {
11.    "Authorization": "Token tutyu567567gfhgfhj6765713gfhgfh908809",
12.    "User-Agent": "PostmanRuntime/7.19.0",
13.    "Accept": "*/*",
14.    "Cache-Control": "no-cache",
15.    "Postman-Token": "32473d98-e0eb-4731-b95a-1f293ef412ef,e641d27c-07d4-4ad1-
16.      89d2-51a97d89344d",
17.    "Host": "127.0.0.1:8000",
18.    "Content-Type": "multipart/form-data; boundary=-----
19.      286063985509474678866833",
20.    "Accept-Encoding": "gzip, deflate",
21.    "Content-Length": "286",
22.    "Connection": "keep-alive",
23.    "cache-control": "no-cache"
24.  },
25.  "processData": false,
26.  "contentType": false,
27.  "mimeType": "multipart/form-data",
28.  "data": form
29. }
30.
31. $.ajax(settings).done(function (response) {
32.   console.log(response);
33. });

```

Also, this function can be executed by Rest API View (see chapter 5)

R example:

```

1. #Require the package so you can use it
2. require("httr")
3. #install.packages("jsonlite")

```

```

4.
5. #Require the package so you can use it
6. require("jsonlite")
7.
8. require("dplyr")
9.
10. # Required to run Loghin.R for obtain Token and paset here
11. Token <- "tutyu567567gfhgfghj6765713gfhgfh908809"
12. #this directive are used because the SSL certificat on Railisa preproduction
   was expired
13. httr::set_config(config(ssl_verifypeer = 0L))
14.
15. #Obtain Domain List
16. api_url_1 <- "https://uic-stats.uic.org/api/domains"
17. get_domain <- GET(api_url_1, add_headers(Authorization = paste("Token",
   Token)))
18. get_domain_text <- content(get_domain, "text", encoding = "UTF-8")
19. get_domain_json <- fromJSON(get_domain_text, flatten = FALSE)
20. get_domain_df <- as.data.frame(get_domain_json[4]$results)
21. message("Domain List")
22. get_domain_df

```

Python example:

```

1. def getDomain(token):
2.     url = 'https://uic-stats.uic.org/api/domains/'
3.     headers = {
4.         'Authorization': 'Token ' + token
5.     }
6.     response = requests.request("GET", url, headers=headers,
   verify=ssl.CERT_NONE)
7.     return response.json()
8.

```

## 7.2 List of filterable variables by domain

For obtain the list of variables the Rest API provide the function “Variable List”

Method: `GET`

URL: `/api/variables/`

Filter by (optional): `domain_id, variable_id, variable_name`  
 (eg. `/api/variables?domain_id=FRET&variable_id=6105&variable_name=Revenue-earning freight traffic on the national territory - Full+wagonloads - total number of tonnes`)

JavaScript example:

```

1. var form = new FormData();
2. form.append("username", "test");
3. form.append("password", "test12345");
4.
5. var settings = {
6.   "async": true,
7.   "crossDomain": true,
8.   "url": "http://uic-stats.uic.org/api/variables/?domain_id
   =FRET&variable_id=6105&variable_name =Revenue-
   earning%20freight%20traffic%20on%20the%20national%20territory%20-
   %20Full%20wagonloads%20-%20total%20number%20of%20tonnes",
9.   "method": "GET",
10.  "headers": {
11.    "Authorization": "Token tutyu567567gfhgfghj6765713gfhgfh908809",
12.    "User-Agent": "PostmanRuntime/7.19.0",
13.    "Accept": "*/*",
14.    "Cache-Control": "no-cache",

```

```

15.     "Postman-Token": "97012ec2-4058-4da3-898f-517fa1051e8e, 964afece-10e0-402f-
    b53b-22ffe08a6e14",
16.     "Host": "uic-stats.uic.org",
17.     "Content-Type": "multipart/form-data; boundary=-----
    782184182105230076277231",
18.     "Accept-Encoding": "gzip, deflate",
19.     "Content-Length": "286",
20.     "Connection": "keep-alive",
21.     "cache-control": "no-cache"
22.   },
23.   "processData": false,
24.   "contentType": false,
25.   "mimeType": "multipart/form-data",
26.   "data": form
27. }
28.
29. $.ajax(settings).done(function (response) {
30.   console.log(response);
31. });
32.

```

Also, this function can be executed by Rest API View (see chapter 5)

R example:

```

1. #Obtain Variable List
2. ## set parameter Domain ID. The list of Domain ID can be obtained by
   get_domain_df Eg. ACCID
3.
4. Dom_ID <- "ACCID"
5. api_url_2 <- "https://uic-stats.uic.org//api/variables/"
6. call_0 <- paste0(api_url_2, "?", "domain_id", "=", Dom_ID)
7. Items <- GET(call_0, add_headers(Authorization = paste("Token", Token)))
8. Items_text <- content(Items, "text", encoding = "UTF-8")
9. Items_json <- fromJSON(Items_text, flatten = TRUE)
10.
11. count <- Items_json[1]$count
12. get_variable_json <- Items_json[4]$results
13. get_variable_df <- as.data.frame(get_variable_json)
14. pages <- round(count/50)
15. for(i in 2:pages){
16.   call_1 <- paste0(api_url_2, "?", "domain_id", "=", Dom_ID, "&", "page", "=",
   i)
17.   get_variable_2 <- GET(call_1, add_headers(Authorization = paste("Token",
   Token)))
18.   get_variable_2_text <- content(get_variable_2, "text", encoding = "UTF-8")
19.   get_variable_2_json <- fromJSON(get_variable_2_text)
20.   get_variable_2_df <- as.data.frame(get_variable_2_json[4]$results)
21.   get_variable_df <- rbind(get_variable_df, get_variable_2_df)
22. }
23. message("Variable List")
24. get_variable_df

```

Python example:

```

1. def getVariable(dom_id, token):
2.     url = 'https://uic-stats.uic.org/api/variables/?domain_id=' + dom_id
3.     headers = {
4.         'Authorization': 'Token ' + token
5.     }
6.     results = {}
7.     results['results'] = []
8.     response = requests.request("GET", url, headers=headers,
   verify=ssl.CERT_NONE)

```

```

9.     raw = response.json()
10.
11.    for i in raw['results']:
12.        results['results'].append(i)
13.
14.    pg = int(raw['count'] / 50) + 1
15.    p = 2
16.    while p <= pg:
17.        try:
18.            r = requests.request("GET", url + '&page=' + str(p),
19.                                  headers=headers, verify=ssl.CERT_NONE)
20.            raw2 = r.json()
21.
22.            for j in raw2['results']:
23.                results['results'].append(j)
24.            finally:
25.                p += 1
26.
27.    return results

```

### 7.3 List of regions

For obtain the list of regions the Rest API provide the function “Region List”

Method: **GET**

URL: </api/regions/>

Filter by (optional): **region\_name** (eg. /api/regions/?region\_name=Africa)

JavaScript example:

```

1. var form = new FormData();
2. form.append("username", "test");
3. form.append("password", "test12345");
4.
5. var settings = {
6.   "async": true,
7.   "crossDomain": true,
8.   "url": "https://uic-stats.uic.org/api/regions/?region_name=Africa",
9.   "method": "GET",
10.  "headers": {
11.    "Authorization": "Token tutyu567567gfhgfhj6765713gfhgfh908809",
12.    "User-Agent": "PostmanRuntime/7.19.0",
13.    "Accept": "*/*",
14.    "Cache-Control": "no-cache",
15.    "Postman-Token": "c1d2c71d-a511-42dc-bf8b-ddda54797c12,c5c5d377-cef8-4a15-
9a61-1c0400895e05",
16.    "Host": "uic-stats.uic.org ",
17.    "Content-Type": "multipart/form-data; boundary=-----
418282051346309597066817",
18.    "Accept-Encoding": "gzip, deflate",
19.    "Content-Length": "286",
20.    "Connection": "keep-alive",
21.    "cache-control": "no-cache"
22.  },
23.  "processData": false,
24.  "contentType": false,
25.  "mimeType": "multipart/form-data",
26.  "data": form
27. }
28.
29. $.ajax(settings).done(function (response) {
30.   console.log(response);
31. });
32.

```

Also, this function can be executed by Rest API View (see chapter 5)

R example:

```
1. #Obtain Region List
2. api_url_3 <- "https://uic-stats.uic.org/api/regions"
3. get_regions <- GET(api_url_3, add_headers(Authorization = paste("Token", Token)))
4. get_regions_text <- content(get_regions, "text", encoding = "UTF-8")
5. get_regions_json <- fromJSON(get_regions_text, flatten = FALSE)
6. get_regions_df <- as.data.frame(get_regions_json[4]$results)
7. message("Region List")
8. get_regions_df
```

Python example:

```
1. def getRegion(token):
2.     url = 'https://uic-stats.uic.org/api/regions/'
3.     headers = {
4.         'Authorization': 'Token ' + token
5.     }
6.     response = requests.request("GET", url, headers=headers,
    verify=ssl.CERT_NONE)
7.     return response.json()
```

## 7.4 List of filterable countries by regions

For obtain the list of countries the Rest API provide the function “Country List”

Method: `GET`

URL: `/api/countries/`

Filter by (optional): `region_id` (eg. `/api/countries/?region_id=AF_C`)

JavaScript example:

```
1. var form = new FormData();
2. form.append("username", "test");
3. form.append("password", "test12345");
4.
5. var settings = {
6.     "async": true,
7.     "crossDomain": true,
8.     "url": "http://uic-stats.uic.org/api/countries/?region_id=AF_C",
9.     "method": "GET",
10.    "headers": {
11.        "Authorization": "Token tutyu567567gfhgfhj6765713gfhgfh908809",
12.        "User-Agent": "PostmanRuntime/7.19.0",
13.        "Accept": "*/*",
14.        "Cache-Control": "no-cache",
15.        "Postman-Token": "2dbd9986-df03-4459-8efe-aad4121377e3,f31c1fae-a085-4f0d-
    8aaa-ba3d6e96cce3",
16.        "Host": "uic-stats.uic.org",
17.        "Content-Type": "multipart/form-data; boundary=-----
    267042938833963093941861",
18.        "Accept-Encoding": "gzip, deflate",
19.        "Content-Length": "286",
20.        "Connection": "keep-alive",
21.        "cache-control": "no-cache"
22.    },
23.    "processData": false,
```

```

24.   "contentType": false,
25.   "mimeType": "multipart/form-data",
26.   "data": form
27. }
28.
29. $.ajax(settings).done(function (response) {
30.   console.log(response);
31. });
32.

```

Also, this function can be executed by Rest API View (see chapter 5)

R example:

```

1. #Obtain Country List
2. # set parameter Region ID. The list of Region ID can be obtained by
   get_regions_df Eg. AF_C
3. Rgn_ID <- ""
4. api_url_4 <- "https://uic-stats.uic.org//api/countries/"
5. call_4 <- paste0(api_url_4, "?", "region_id", "=", Rgn_ID)
6. Items4 <- GET(call_4,add_headers(Authorization = paste("Token", Token)))
7. Items4_text <- content(Items4, "text", encoding = "UTF-8")
8. Items4_json <- fromJSON(Items4_text, flatten = TRUE)
9.
10. count <- Items4_json[1]$count
11. get_countries_json <- Items4_json[4]$results
12. get_countries_df <- as.data.frame(get_countries_json)
13. pages <- round(count/50)
14. for(i in 2:pages){
15.   call_5 <- paste0(api_url_4, "?", "region_id", "=", Rgn_ID, "&", "page", "=",
   i)
16.   get_countries_2 <- GET(call_5,add_headers(Authorization = paste("Token",
   Token)))
17.   get_countries_2_text <- content(get_countries_2, "text", encoding = "UTF-8")
18.   get_countries_2_json <- fromJSON(get_countries_2_text)
19.   get_countries_2_df <- as.data.frame(get_countries_2_json[4]$results)
20.   get_countries_df <- rbind(get_countries_df, get_countries_2_df)
21. }
22. message("Countries List")
23. get_countries_df

```

Python example:

```

1. def getCountry(rgn_id, token):
2.     url = 'https://uic-stats.uic.org/api/countries/?region_id=' + rgn_id
3.     headers = {
4.         'Authorization': 'Token ' + token
5.     }
6.     results = {}
7.     results['results'] = []
8.     response = requests.request("GET", url, headers=headers,
   verify=ssl.CERT_NONE)
9.     raw = response.json()
10.
11.     for i in raw['results']:
12.         results['results'].append(i)
13.
14.     pg = int(raw['count'] / 50) + 1
15.     p = 2
16.
17.     while p <= pg:
18.         try:
19.             r = requests.request("GET", url + '&page=' + str(p),
   headers=headers, verify=ssl.CERT_NONE)
20.             raw2 = r.json()

```

```

21.         for j in raw2['results']:
22.             results['results'].append(j)
23.     finally:
24.         p += 1
25. return results

```

## 7.5 List of filterable company by countries

For obtain the list of companies the Rest API provide the function “Company List”

Method: `GET`

URL: `/api/companies/`

Filter by (optional): `country_id`, `company_name` (eg. `/api/companies/?country_id=DZ&company_name=SNTF`)

JavaScript example:

```

1. var form = new FormData();
2. form.append("username", "test");
3. form.append("password", "test12345");
4.
5. var settings = {
6.   "async": true,
7.   "crossDomain": true,
8.   "url": "http://uic-
stats.uic.org/api/companies/?country_id=DZ&company_name=SNTF",
9.   "method": "GET",
10.  "headers": {
11.    "Authorization": "Token tutyu567567gfhgfhj6765713gfhgfh908809",
12.    "User-Agent": "PostmanRuntime/7.19.0",
13.    "Accept": "*/*",
14.    "Cache-Control": "no-cache",
15.    "Postman-Token": "1a72c877-a5e7-40d8-9687-2fe2e519235e,f19d7c45-5c20-49ee-
8ffb-a15461e316cb",
16.    "Host": "uic-stats.uic.org",
17.    "Content-Type": "multipart/form-data; boundary=-----
204517922753159705986767",
18.    "Accept-Encoding": "gzip, deflate",
19.    "Content-Length": "286",
20.    "Connection": "keep-alive",
21.    "cache-control": "no-cache"
22.  },
23.  "processData": false,
24.  "contentType": false,
25.  "mimeType": "multipart/form-data",
26.  "data": form
27. }
28.
29. $.ajax(settings).done(function (response) {
30.   console.log(response);
31. });

```

Also, this function can be executed by Rest API View (see chapter 5)

R example:

```

1. #Obtain Company List
2. # set parameter Country ID. The list of Country ID can be obtained by
  get_countries_df Eg. DE
3. Ctry_ID <- ""
4. api_url_6 <- "https://uic-stats.uic.org//api/companies/"

```

```

5. call_6 <- paste0(api_url_6, "?", "country_id", "=", Ctry_ID)
6. Items6 <- GET(call_6, add_headers(Authorization = paste("Token", Token)))
7. Items6_text <- content(Items6, "text", encoding = "UTF-8")
8. Items6_json <- fromJSON(Items6_text, flatten = TRUE)
9.
10. count <- Items6_json[1]$count
11. get_companies_json <- Items6_json[4]$results
12. get_companies_df <- as.data.frame(get_companies_json)
13. pages <- round(count/50)
14. for(i in 2:pages){
15.   call_7 <- paste0(api_url_6, "?", "country_id", "=", Ctry_ID, "page", "=", i)
16.   get_companies_2 <- GET(call_7, add_headers(Authorization = paste("Token",
17.   Token)))
17.   get_companies_2_text <- content(get_companies_2, "text", encoding = "UTF-8")
18.   get_companies_2_json <- fromJSON(get_companies_2_text)
19.   get_companies_2_df <- as.data.frame(get_companies_2_json[4])
20.   get_companies_df <- rbind(get_companies_df, get_companies_2_df)
21. }
22. message("Company List")
23. get_companies_df
24.

```

Python example:

```

1. def getCompany(ctry_id, token):
2.     url = 'https://uic-stats.uic.org/api/companies/?country_id' + ctry_id
3.     headers = {
4.         'Authorization': 'Token ' + token
5.     }
6.     results = {}
7.     results['results'] = []
8.     response = requests.request("GET", url, headers=headers,
verify=ssl.CERT_NONE)
9.     raw = response.json()
10.
11.     for i in raw['results']:
12.         results['results'].append(i)
13.
14.     pg = int(raw['count'] / 50) + 1
15.     print("start call " + str(pg) + " API pages")
16.     p = 2
17.
18.     print("Page 1 loaded")
19.
20.     while p <= pg:
21.         print("Page " + str(p) + " loaded")
22.         try:
23.             r = requests.request("GET", url + '&page=' + str(p),
headers=headers, verify=ssl.CERT_NONE)
24.             raw2 = r.json()
25.             for j in raw2['results']:
26.                 results['results'].append(j)
27.             finally:
28.                 p += 1
29.     return results

```

## 7.6 List of activities

For obtain the list of activities the Rest API provide the function “Activity List”

Method: **GET**  
URL: **/api/activities/**  
Filter by (optional): **activity\_name** (eg. /api/activities/?activity\_name=Freight Operator)

JavaScript example:

```

33. var form = new FormData();
34. form.append("username", "test");
35. form.append("password", "test12345");
36.
37. var settings = {
38.   "async": true,
39.   "crossDomain": true,
40.   "url": "https://uic-stats.uic.org/api/activities/?activity_name=Freight
    Operator",
41.   "method": "GET",
42.   "headers": {
43.     "Authorization": "Token tutyu567567gfhgfhj6765713gfhgfh908809",
44.     "User-Agent": "PostmanRuntime/7.19.0",
45.     "Accept": "*/*",
46.     "Cache-Control": "no-cache",
47.     "Postman-Token": "c1d2c71d-a511-42dc-bf8b-ddda54797c12,c5c5d377-cef8-4a15-
    9a61-1c0400895e05",
48.     "Host": "uic-stats.uic.org",
49.     "Content-Type": "multipart/form-data; boundary=-----
    418282051346309597066817",
50.     "Accept-Encoding": "gzip, deflate",
51.     "Content-Length": "286",
52.     "Connection": "keep-alive",
53.     "cache-control": "no-cache"
54.   },
55.   "processData": false,
56.   "contentType": false,
57.   "mimeType": "multipart/form-data",
58.   "data": form
59. }
60.
61. $.ajax(settings).done(function (response) {
62.   console.log(response);
63. });
64.

```

Also, this function can be executed by Rest API View (see chapter 5)

R example:

```

9. #Obtain Activity List
10. api_url_3 <- "https://uic-stats.uic.org/api/activities"
11. get_activity <- GET(api_url_3, add_headers(Authorization = paste("Token",
    Token)))
12. get_activity_text <- content(get_activity, "text", encoding = "UTF-8")
13. get_activity_json <- fromJSON(get_activity_text, flatten = FALSE)
14. get_activity_df <- as.data.frame(get_activity_json[4]$results)
15. message("Activity List")
16. get_regions_df

```

Python example:

```

8. def getActivity(token):
9.     url = 'https://uic-stats.uic.org/api/activities'
10.    headers = {
11.        'Authorization': 'Token ' + token
12.    }
13.    response = requests.request("GET", url, headers=headers,
    verify=ssl.CERT_NONE)
14.    return response.json()

```

## 7.7 List of unit

For obtain the list of units the Rest API provide the function “Unit List”

Method: `GET`

URL: `/api/unit/`

Filter by (optional): `unit_name` (eg. `/api/unit/?unit_name=cubic metre`)

JavaScript example:

```
65. var form = new FormData();
66. form.append("username", "test");
67. form.append("password", "test12345");
68.
69. var settings = {
70.   "async": true,
71.   "crossDomain": true,
72.   "url": "https://uic-stats.uic.org/api/unit/?unit_name=cubic metre",
73.   "method": "GET",
74.   "headers": {
75.     "Authorization": "Token tutyu567567gfhgfghj6765713gfhgfh908809",
76.     "User-Agent": "PostmanRuntime/7.19.0",
77.     "Accept": "*/*",
78.     "Cache-Control": "no-cache",
79.     "Postman-Token": "c1d2c71d-a511-42dc-bf8b-ddda54797c12,c5c5d377-cef8-4a15-
9a61-1c0400895e05",
80.     "Host": "uic-stats.uic.org ",
81.     "Content-Type": "multipart/form-data; boundary=-----
418282051346309597066817",
82.     "Accept-Encoding": "gzip, deflate",
83.     "Content-Length": "286",
84.     "Connection": "keep-alive",
85.     "cache-control": "no-cache"
86.   },
87.   "processData": false,
88.   "contentType": false,
89.   "mimeType": "multipart/form-data",
90.   "data": form
91. }
92.
93. $.ajax(settings).done(function (response) {
94.   console.log(response);
95. });
96.
```

Also, this function can be executed by Rest API View (see chapter 5)

R example:

```
17. #Obtain Unit List
18. api_url_3 <- "https://uic-stats.uic.org/api/unit"
19. get_unit <- GET(api_url_3, add_headers(Authorization = paste("Token", Token)))
20. get_unit_text <- content(get_unit, "text", encoding = "UTF-8")
21. get_unit_json <- fromJSON(get_unit_text, flatten = FALSE)
22. get_unit_df <- as.data.frame(get_unit_json[4]$results)
23. message("Unit List")
24. get_regions_df
```

Python example:

```
15. def getUnit(token):
```

```

16.     url = 'https://uic-stats.uic.org/api/unit'
17.     headers = {
18.         'Authorization': 'Token' + token
19.     }
20.     response = requests.request("GET", url, headers=headers,
    verify=ssl.CERT_NONE)

```

## 7.8 List of company activity by company

# 8 API for selections data with dynamic filtering capabilities

This function is representations of “Selection View” by Railisa web.

For obtain selection result the Rest API provide the function “Visualization List”

Method: GET

URL: /api/visualisation/

Filter by (optional): companies, regions, countries, variables, max\_year, min\_year, value\_visibility, value\_last\_update, unit\_id, domain\_id (eg.

/api/visualisation/?companies=RFF,CFR&regions=EUR\_C&countries=RO,FR&variables=1004,1110&min\_year=1995&max\_year=2018&value\_visibility=1&value\_last\_update=2012-11-26&unit\_id=4&domain\_id=INFRA)

**Note:**

Variables = it is a composite get parameter represented by list of company of variable\_id separated by ,

Companies = it is a composite get parameter represented by list of company company\_name separated by ,

Countries = it is a composite get parameter represented by list of country country\_id separated by ,

Visibility = it is level of visibility (1=Public, 2=Public + Member, 3=Member)

JavaScript example:

```

1. var form = new FormData();
2. form.append("username", "test");
3. form.append("password", "test12345");
4.
5. var settings = {
6.     "async": true,
7.     "crossDomain": true,
8.     "url": "http://uic-
stats.uic.org//api/visualisation/?companies=RFF,CFR&regions=EUR_C&countries=RO,FR
&variables=1004,1110&min_year=1995&max_year=2018&value_visibility=1&value_last_up
date=2012-11-26&unit_id=4&domain_id=INFRA",
9.     "method": "GET",
10.    "headers": {
11.        "Authorization": "Token tutyu567567gfhgfhj6765713gfhgfh908809",
12.        "User-Agent": "PostmanRuntime/7.19.0",
13.        "Accept": "*/*",
14.        "Cache-Control": "no-cache",
15.        "Postman-Token": "182c698d-4805-4cf8-950c-74656a654174,6402153b-73ca-426d-
80f9-2db5f8db7246",
16.        "Host": "uic-stats.uic.org",
17.        "Content-Type": "multipart/form-data; boundary=-----
085594795765079419433806",
18.        "Accept-Encoding": "gzip, deflate",
19.        "Content-Length": "286",
20.        "Connection": "keep-alive",
21.        "cache-control": "no-cache"
22.    },
23.    "processData": false,
24.    "contentType": false,

```

```

25.   "mimeType": "multipart/form-data",
26.   "data": form
27. }
28.
29. $.ajax(settings).done(function (response) {
30.   console.log(response);
31. });
32.

```

Also, this function can be executed by Rest API View (see chapter 5)

R example:

```

1. # Title      : Railisa R Client for Rest API
2. # Objective  : Demo. How to consuming Railisa Rest API in R
3. # Created by: lucian
4. # Created on:30/08/2021
5.
6. #install.packages("httr")
7.
8. #Require the package so you can use it
9. require("httr")
10. #install.packages("jsonlite")
11.
12. #Require the package so you can use it
13. require("jsonlite")
14.
15. # Required to run LogIn.R for obtain Token and paset here
16. Token <- "tutyu567567gfhgfghj6765713gfhgfh908809"
17. #this directive are used because the SSL certificat on Railisa preproduction
   was expired
18. httr::set_config(config(ssl_verifypeer = 0L))
19.
20. ## set parameters
21. ### Variables (variable ID) Eg. 1110,2306
22. Var_ID <- ""
23.

  Unit_ID, "&", "domain_id", "=",
  Dom_ID, "&", "page", "=",
  i)
66.     Items2 <- GET(call_1, add_headers(Authorization = paste("Token", Token)))
67.     Items2_text <- content(Items2, "text", encoding = "UTF-8")
68.     Items2_json <- fromJSON(Items2_text, flatten = TRUE)
69.     get_selections2_json <- Items2_json[4]$results
70.     get_selections2_df <- as.data.frame(get_selections2_json)
71.     get_selections_df <- rbind(get_selections_df, get_selections2_df)
72.   }
73. }
74. get_selections_df
75.

```

Python example:

```

1. def getSelection(var_id, min_year, max_year, countries, regions, companies,
  visibility, value_last_update, unit_id, domain_id, token):
2.   url = 'https://uic-
  stats.uic.org//api/visualisation/?variables=' + var_id + '&min_year=' + min_year + '&max_
  year=' + max_year + '&countries=' + countries + '&companies=' + companies +
  '&value_visibility=' + visibility + '&value_last_update =' + value_last_update +
  '&unit_id=' + unit_id + '&domain_id=' + domain_id
3.   headers = {
4.     'Authorization': 'Token ' + token
5.   }
6.   results = {}
7.   results['results'] = []
8.   response = requests.request("GET", url, headers=headers,
  verify=ssl.CERT_NONE)
9.   raw = response.json()
10.
11.   for i in raw['results']:
12.     results['results'].append(i)
13.
14.   pg = int(raw['count'] / 50) + 1
15.   p = 2
16.
17.   while p <= pg:
18.     try:
19.       r = requests.request("GET", url + '&page=' + str(p),
  headers=headers, verify=ssl.CERT_NONE)
20.       raw2 = r.json()
21.       for j in raw2['results']:
22.         results['results'].append(j)
23.     finally:
24.       p += 1
25.   return results
26.

```

## 9 API for CSV export based on API for selections data

This function is representations of “Download View” by Railisa web.

For obtain selection result the Rest API provide the function “CSV export of Visualization List”

Method: GET

URL: /api/download/

Filter by (optional): companies, regions, countries, variables, max\_year, min\_year, value\_visibility, value\_last\_update, unit\_id, domain\_id (eg. /api/download/?companies=RFF,CFR&regions=EUR\_C&countries=RO,FR&variables=1004,1110&min\_year=1995&max\_year=2018&value\_visibility=1&value\_last\_update=2012-11-26&unit\_id=4&domain\_id=INFRA)

**Note:**

Variables = it is a composite get parameter represented by list of company of variable\_id separated by ,

Companies = it is a composite get parameter represented by list of company company\_name separated by ,

Countries = it is a composite get parameter represented by list of country country\_id separated by ,

Visibility = it is level of visibility (1=Public, 2=Public + Member, 3=Member)

JavaScript example:

```
1. var form = new FormData();
2. form.append("username", "test");
3. form.append("password", "test12345");
4.
5. var settings = {
6.   "async": true,
7.   "crossDomain": true,
8.   "url": "http://uic-
  stats.uic.org//api/visualisation/?companies=RFF,CFR&regions=EUR_C&countries=RO,FR
  &variables=1004,1110&min_year=1995&max_year=2018&value_visibility=1&value_last_up
  date=2012-11-26&unit_id=4&domain_id=INFRA",
9.   "method": "GET",
10.  "headers": {
11.    "Authorization": "Token tutyu567567gfhgfhj6765713gfhgfh908809",
12.    "User-Agent": "PostmanRuntime/7.19.0",
13.    "Accept": "*/*",
14.    "Cache-Control": "no-cache",
15.    "Postman-Token": "182c698d-4805-4fcf-950c-74656a654174,6402153b-73ca-426d-

16.    "Host": "uic-stats.uic.org",
17.    "Content-Type": "multipart/form-data; boundary=-----
  085594795765079419433806",
18.    "Accept-Encoding": "gzip, deflate",
19.    "Content-Length": "286",
20.    "Connection": "keep-alive",
21.    "cache-control": "no-cache"
22.  },
23.  "processData": false,
24.  "contentType": false,
25.  "mimeType": "multipart/form-data",
26.  "data": form
27. }
28.
29. $.ajax(settings).done(function (response) {
30.   console.log(response);
31. });
32.
33.
```

## Python example:

This function can't be executed by Rest API View because the result is in CSV format, and this result can't be rendered by web browser.

This function can be tested by [Postman](#) application or other Test API applications.

The screenshot shows a browser-based API testing interface. At the top, there are tabs for 'New', 'Import', 'Runner', and 'Invite'. The main area displays a 'My Workspace' dropdown and a 'No Environment' button. Below this, a 'Comments' section is visible.

The request URL is `https://uic-stats-pp.uic.org/api/dormitory/`. The method is 'GET' and the status is '200 OK'. The response time is 6.64 ms and the size is 23.49 kB.

The 'Params' tab is selected, showing the following parameters:

Key	Value	Description
var_id		Unit;Region;Ctry;City Name;Company;Year;Visibility;Value
min_year	2017	High Speed;1804;Length of HS lines - Maximal line speed: 250 km/h and over - end of year;kilometres;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;594
max_year	2018	High Speed;1895;Length of HS lines - Maximal line speed: more than 160 km/h and less than 250 km/h - end of year;kilometres;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;619
countries	TR	Infrastructure;1109;Length of not electrified single track lines - end of year;kilometres;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;5869
companies		Infrastructure;1110;Length of electrified lines - end of year;kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;165
visibility	1	Infrastructure;1111;Length of electrified double track lines - end of year;kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;1088

The 'Body' tab is selected, showing the raw JSON response:

```
[{"key": "var_id", "value": "Unit;Region;Ctry;City Name;Company;Year;Visibility;Value", "description": "Unit;Region;Ctry;City Name;Company;Year;Visibility;Value"}, {"key": "min_year", "value": "2017", "description": "High Speed;1804;Length of HS lines - Maximal line speed: 250 km/h and over - end of year;kilometres;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;594"}, {"key": "max_year", "value": "2018", "description": "High Speed;1895;Length of HS lines - Maximal line speed: more than 160 km/h and less than 250 km/h - end of year;kilometres;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;619"}, {"key": "countries", "value": "TR", "description": "Infrastructure;1109;Length of not electrified single track lines - end of year;kilometres;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;5869"}, {"key": "companies", "value": "", "description": "Infrastructure;1110;Length of electrified lines - end of year;kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;165"}, {"key": "visibility", "value": "1", "description": "Infrastructure;1111;Length of electrified double track lines - end of year;kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;1088"}, {"key": "Key", "value": "Body", "description": "Infrastructure;1112;Length of lines worked - end of year;kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;12087"}, {"key": "Key", "value": "Body", "description": "Infrastructure;1113;Length of tracks - end of year;kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;12688"}, {"key": "Key", "value": "Body", "description": "Infrastructure;1114;Length of electrified tracks - end of year;kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;4668"}, {"key": "Key", "value": "Body", "description": "Infrastructure;1115;Length of double-tracked lines not electrified;kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;173"}, {"key": "Key", "value": "Body", "description": "Infrastructure;1116;Length of single-tracked electrified lines;kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;3157"}, {"key": "Key", "value": "Body", "description": "Train Movements - Infrastructure Manager;1284;Train-km on the network of the infrastructure manager - All types of traction;thousand train-kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;49196"}, {"key": "Key", "value": "Body", "description": "Train Movements - Infrastructure Manager;1285;Train-km on the network of the infrastructure manager - All types of traction - Passenger trains;thousand train-kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;27398"}, {"key": "Key", "value": "Body", "description": "Train Movements - Infrastructure Manager;1286;Train-km on the network of the infrastructure manager - All types of traction - Freight trains;thousand train-kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;21799"}, {"key": "Key", "value": "Body", "description": "Train Movements - Infrastructure Manager;1287;Train-km on the network of the infrastructure manager - Diesel traction;thousand train-kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;27889"}, {"key": "Key", "value": "Body", "description": "Train Movements - Infrastructure Manager;1288;Train-km on the network of the infrastructure manager - Diesel traction - Passenger trains;thousand train-kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;10845"}, {"key": "Key", "value": "Body", "description": "Train Movements - Infrastructure Manager;1289;Train-km on the network of the infrastructure manager - Diesel traction - Freight trains;thousand train-kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;17044"}, {"key": "Key", "value": "Body", "description": "Train Movements - Infrastructure Manager;1210;Train-km on the network of the infrastructure manager - Electric traction;thousand train-kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;14730"}, {"key": "Key", "value": "Body", "description": "Train Movements - Infrastructure Manager;1211;Train-km on the network of the infrastructure manager - Electric traction - Passenger trains;thousand train-kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;973"}, {"key": "Key", "value": "Body", "description": "Train Movements - Infrastructure Manager;1213;Train-km on the network of the infrastructure manager - Electric traction - Freight trains;thousand train-kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;4957"}, {"key": "Key", "value": "Body", "description": "Train Movements - Infrastructure Manager;1384;Gross hauled Tonnek on the network of the infrastructure manager - All types of traction;million gross tonne-kilometre;EUROPE;TR ;Turkey;TCDD INFRA;2017;Public;27091"}]
```

At the bottom, there are buttons for 'Bootcamp', 'Build', and 'Browse'.
